

# Developments in Smart Mobility

A perspective from Rijkswaterstaat

Executive Agency of the Netherlands Ministry of  
Infrastructure and Water Management

Ronald Adams/projectmanager smart mobility

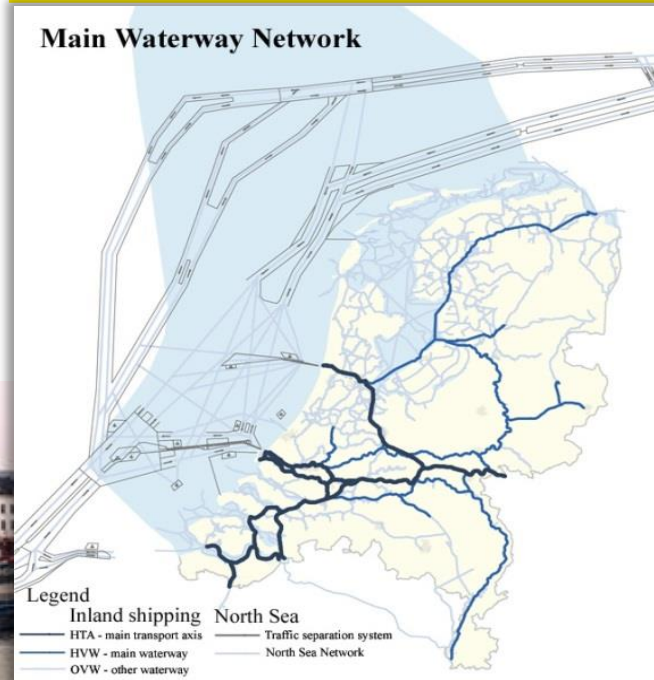

# Rijkswaterstaat is responsible for 3 networks

Highways:  
3.100 km

Waterways:  
8.000 km

Water systems:  
90.000 km<sup>2</sup>

# Primary Dutch road network

- > Covers 0.7 percent of the Netherlands
- > Most intensively-used roads in the world
- > 68 bln. vehicle kilometres travelled each year
- > 3 mln. road users every day

- > Main responsibilities Rijkswaterstaat:
  - building new infra
  - maintenance
  - traffic management and ITS/smart mobility

# Smart Mobility: goals

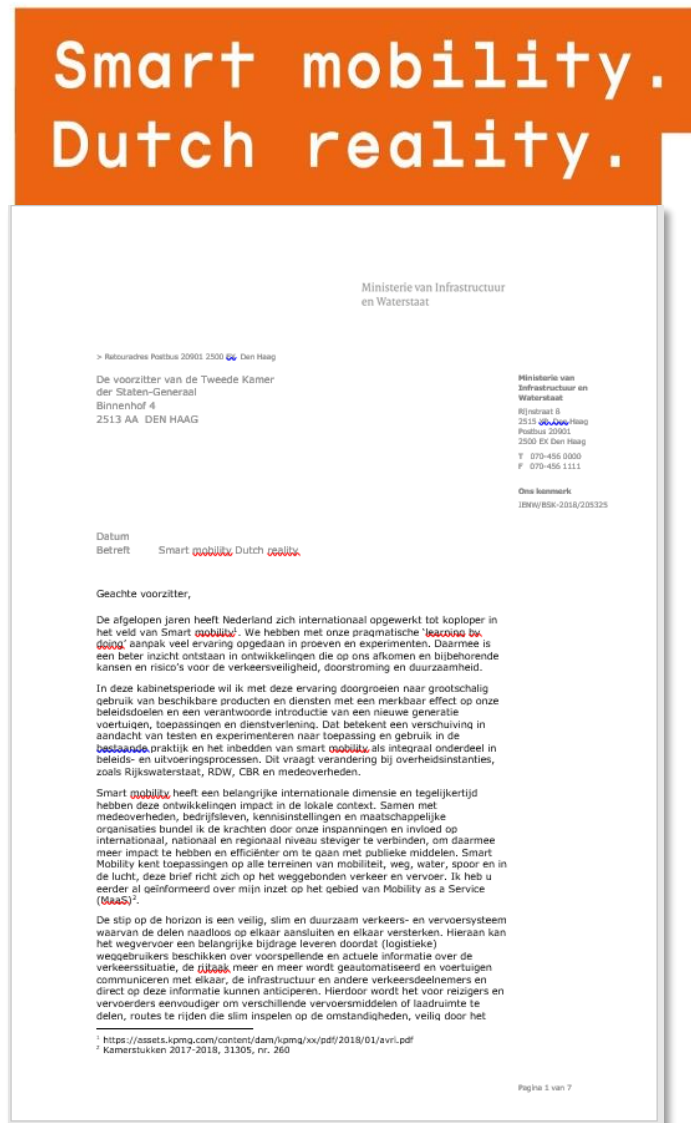

- › Make our traffic and transport system:
  - Sustainable
  - Safe
  - Smart
- › Create new and better services for our road users
- › Develop new markets together with our partners

# Dutch policy: 'Smart Mobility, Dutch Reality!'

- 1) **Encouraging** the use of existing products and services
- 2) Responsible **introduction** of a new generation of vehicles
- 3) Future-ready **infrastructure** and road management
- 4) Careful utilisation of **data** exchange and connectivity
- 5) From trials and pilots to large scale **deployment**

Letter from our Minister to the Dutch Parliament 4 October 2018: 'Smart Mobility, Dutch reality'.

# Cooperation crucial to achieve smart mobility goals...

## > **Between partners:**

- Public
- Private
- Science and knowledge

## > **On different levels:**

- City/regional
- National
- European
- Worldwide

# ... cooperation and interaction on many levels

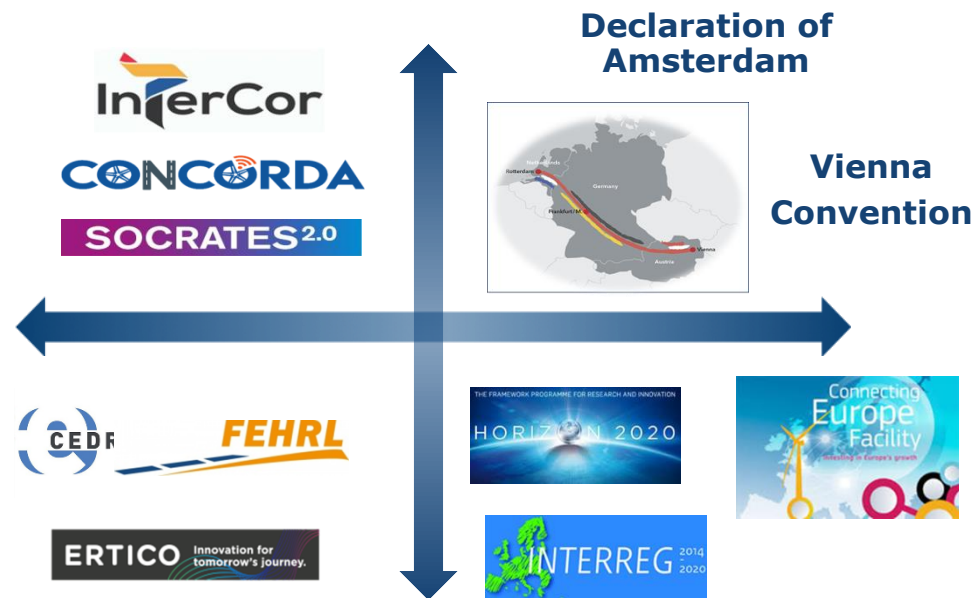

## National Policy

National implementation

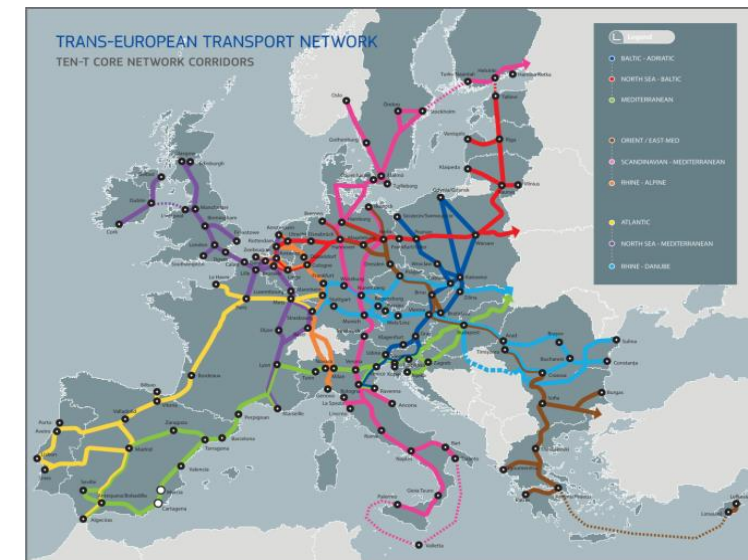

Rijkswaterstaat

## Transboundary coordination

International Projects and platforms

## EU Policy

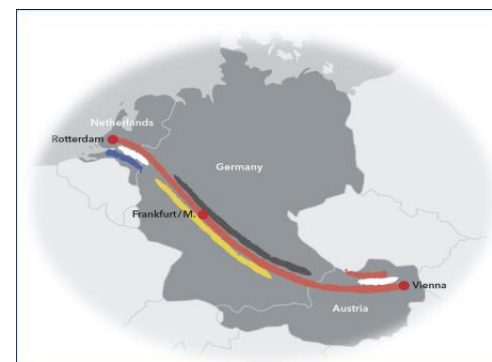

EU grants and implementation framework

Through European:  
platforms and...

... projects

# CONCORDA

2017 – 2021

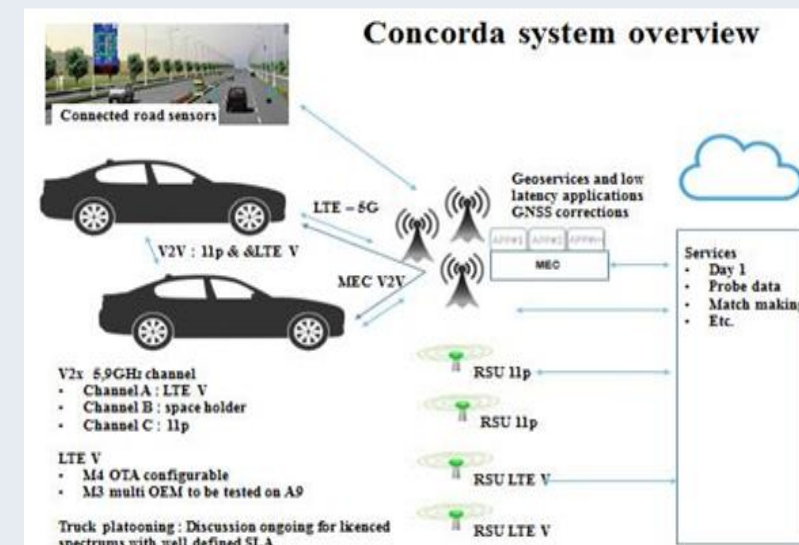

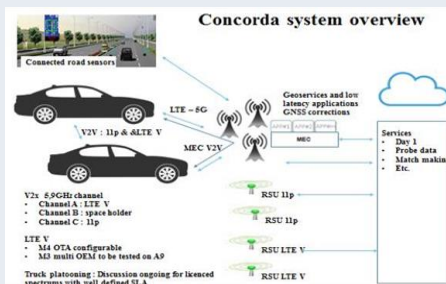

EU grant: €10 mln

Leadpartner: **ERTICO**

Aim is to test and enhance connected and autonomous driving and hybrid communication (ITS G5 and LTE-V/5G) possibilities in 5 European countries.

## Unique selling points of Concorda pilot Amsterdam

- Testing autonomous driving with NXP, KPN, RDW and Fiat Chrysler Automobiles
- Urban Chauffeur use cases
- Interurban test tracks (highway, provincial and urban roads)

FAST SAFE GREEN **SOCRATES<sup>2.0</sup>**

**2017 – 2020**

EU grant: **€1,65 mln**

Leadpartner:  
**Rijkswaterstaat**

Main goal: network optimisation and better services for road users based on public-private data exchange.

International public-private cooperation (car industry, navigation industry, service providers, and road authorities).

Testing next generation of Interactive Traffic Management in 4 European cities and in cooperation with Ertico TM 2.0 Innovation Platform.

**SOCRATES<sup>2.0</sup> pilots**

**Amsterdam**  
6000 drivers  
3 VC's  
6 SP's

**Copenhagen**  
1000 drivers  
1 VC's  
6 SP's

**Munich**  
1000 drivers  
1 VC's  
5 SP's

**Antwerp**  
1000 drivers  
1 VC's  
6 SP's

**Vision**

2016 – 2020

EU grant: €1,65 mln

Leadpartner:

**Rijkswaterstaat and  
since 31-8-2019 France.  
Both supported by Ertico**

Service	The Netherlands	France	Belgium	UK
In Vehicle Signage	x	x	(x)	x
Probe Data	x	x		x
Road Works Warning	x	x	x	x
GLOSA	x	x	x	x
Multimodal cargo transport optimisation	x	x		x (freight slots for ports)
Truck Parking	x	x		x
Tunnel logistics	x		x	x

European cooperation between four Member States and private industry on the standardisation and interoperability of 7 C-ITS services:

- Road Works Warning (RWW)
- In-Vehicle Signage (IVS)
- Probe Vehicle Data (PVD)
- Collision Risk Warning (CRW)
- Truck Parking
- Multi-modal Cargo Transport Optimization (MCTO)
- Tunnel logistics

# Conclusions and possible topics for discussion

## **Smart Mobility = Serving several goals**

Interesting and important question is on which goals the **focus** will be for the coming years and what the possibilities on an European level are to maximise the contributions to realise those goals.

## **Smart Mobility = (multimodal) integration and cooperation on different levels**

Smart Mobility is complex and will have effects on the complete mobility system. That means that **large scale deployment** needs a long term (public and private) vision, time and consistency on European, national, regional and urban levels.

## **Smart Mobility = Based on Data**

Everything we do in the area of ITS and Smart Mobility is based on **data**. So this is definitely an interesting topic for further discussion and a possible game changer. For public and private partners. And on different levels. Also think about privacy and security. A European vision on data is important.

Thank you for your attention.
